ENGINEERS IN SCHOOLS PROGRAM

Discover Engineering, the Engineers in Schools Program has been established by Engineers Australia, Victorian Division to provide students with the opportunity to learn more about engineering and what it involves.

The program links aspiring engineers or engineering professionals with the next generation, providing them with the platform to promote their profession and motivate students to consider a career in engineering.

Discover Engineering targets groups who are not necessarily exposed to information regarding the engineering profession through other facets of everyday life.

This initiative aims to:

- Boost awareness of the benefits of being an engineer;
- Endeavour to increase enrollment in engineering;
- Encourage sharing of knowledge and engineering experience.

Students may be uninformed about the study of engineering and unprepared for the rigor and discipline it entails. This speaking program will help to combat this lack of awareness by mobilising industry professionals to promote high-school level, pre-engineering education.

A member of Engineers Australia will be selected according to your requirements, to visit your school or institution and deliver a targeted presentation on engineering.

This program is also a vehicle to promote student involvement in Engineering Week activities which are designed to inform and excite students about careers in engineering.

By promoting involvement in Engineering Week, we may be able to attract more and better quality students into engineering courses and ensure that the message that engineers help create a better future is widely communicated.

Register for an Engineer to visit your school

If you are interested in having an engineer visit your school or institution, please contact Sandra Perrett at Engineers Australia, Victoria Division

Phone: (03) 9321 1725

Email: sperrett@engineersaustralia.org.au

Engineers Australia is the peak professional body of the engineering profession across all industry sectors in Australia. As such, it has an obligation to promote engineering and enhance the image and stature of engineering professionals.
