

CELEBRATING
OUR CENTENARY

ENGINEERS
AUSTRALIA

Projects and Pizza

This event aims to recognise young engineers in front of their peers through providing them with an opportunity to highlight and share both their contributions to and outcomes from engineering projects they have worked on in their career.

SPEAKERS:

Benjamin Hanley

Benjamin is a chartered environmental engineer and finance MBA graduate working with Lendlease on

some of the most contaminated construction sites in Australia and abroad. Benjamin has contributed to iconic Sydney projects including Darling Harbour Sofitel, Darling Square urban regeneration and Barangaroo Hickson Road remediation.

More importantly, he's got loads of great stories, footage and photos to share during his presentation regarding the risks and opportunities presented by contaminated sites and construction waste.

Jerald Skuta

At Honeywell Jerald is known as a 'Connected Professional'. Not even he knows what that means. His key skill is

collecting and analysing data to make informed decisions in new and innovative ways. Jerald has led cloud analytics projects at some of Sydney's most famous buildings including:

- 400 George Street (Telstra Building)
- Chifley Tower
- Reserve Bank of Australia
- Sydney Opera House

He also works with the local and international software teams developing new products. His presentation is about one of those products that leverages the Internet of Things (IoT) called the Vector Platform.

Date

13/06/2019 - 6.30pm to 9.00pm (AEST)

Venue

WSP Function Area
Level 27, Ernst & Young Centre
680 George Street,
Sydney, NSW, 2000

Host

Young Engineers Australia (YEA)
