Community Permission for Major Projects? Ignore at your peril!

7:00am - 9:00am, Tuesday 24 May 2016
Adelaide Pavilion Veale Gardens
Corner South Terrace & Peacock Road, Adelaide SA 5000

As engineers, it is easy to get caught up in the 'excitement' of a big, new infrastructure project but community and other stakeholder expectations are ever changing and higher than ever.

Not adequately resourcing how a project will manage "the bigger picture" or non-engineering aspects can result in costly delays and have a serious impact on the project's future success.

Steve Brown and Anya Hart share their combined learnings and experience with stakeholder engagement and community relations on recent infrastructure projects in South Australia.

Stephen Brown – Projects Operations Manager, SAGE Automation
Stephen has over 35 years of experience working on major projects across a number of industries. These include roles as CEO of the Port Spencer Joint Venture and Chief Operating Officer for the Eyre Iron Joint Venture. Leading these Joint Ventures between Centrex Metals and Wuhan Iron & Steel Company required Steve to develop the engineering designs for a greenfield 100MTpa mine, magnetite concentrator, slurry pipeline and new port, as well as negotiate all State and Federal Approvals.

Anya Hart – Community and Environment Associate, COOE Pty Ltd
Starting her career as an Engineering Cadet at the then BHP Steelworks in Whyalla, Anya has used her 10 years in technical and operational roles and postgraduate qualifications in environmental management as a foundation to successfully transition into the stakeholder engagement space. Anya has vast experience managing community relations and stakeholder engagement programs in sensitive, regional communities on mining, exploration and infrastructure development projects in South Australia.
