Join fellow engineers for an informed presentation on the Sunshine Coast Council’s flooding and stormwater management guidelines.

5.30 - 8.30pm | Tuesday 20 August 2019

Waterfront Hotel
2/46 David Low Way, Diddillibah, QLD 4558

Following the release of the State Planning Policy (2017) and the 2016 revision of Australian Rainfall and Runoff, Sunshine Coast Council has prepared flooding and stormwater management guidelines and supporting technical documents to assist a future planning scheme amendment.

These guidelines aim to support the codes and policies of the planning scheme by providing additional detail around how stormwater quality, quantity and drainage and flooding issues are to be managed.

Additionally, these guidelines are also intended to provide guidance on how to comply with the future code requirements and policies of the Sunshine Coast Planning Scheme – all of which will be discussed in detail on the night.

Delivering this presentation are the likes of Nadia Guterres, Rob Booker and Crispin Smythe, all of whom are involved directly with the creation and implementation of the Sunshine Coast Council’s flooding and stormwater management guidelines.

Introducing your presenters.

Nadia Guterres
Nadia is a Senior Engineer within the Sunshine Coast Council Flooding and Stormwater Planning and Policy team. Nadia has 15 years’ experience as a flooding and stormwater engineer, working in both the private and public sectors for a wide range of projects across Queensland. Nadia has experience in numerous flood, drainage, stormwater quality and water balance modelling packages. She is currently responsible for overland flow path mapping throughout the Sunshine Coast region and development of Council’s Stormwater Management Strategy.

Rob Booker
Rob is an environmental engineer with a background in both the private and public sectors. He has worked as a consulting engineer and in local government in a 16-year career which has seen him working in Australia, Canada, Peru and Papua New Guinea on a variety of projects including predicting water quality, mine closure and dam drainage and flood prevention just to name a few. In his current role, Rob is responsible for assessing development applications and providing expert advice to Council on matters related primarily to flooding and stormwater management.

Crispin Smythe
Crispin is the Coordinator of the Sunshine Coast Council Flooding and Stormwater Planning and Policy Team. With more than 20 years’ experience as a hydrologist, Crispin currently oversees a team responsible for Council’s flood mapping, flood models, flood warning system and flooding and stormwater policy development. Crispin graduated with Honours as a Civil Engineer from Adelaide University in 1995, and is a Chartered Professional Engineer and a Registered Professional Engineer of Queensland.
